

## 自己定义的React组件Label

### Label.tsx

```
1 interface IProps{
2   ref:any;
3 }
4 const Label = ({ref}:IProps) => {
5   return <div ref={ref}>标签</div>
6 }
```

希望拿到Label组件的实例.

然而报错: Function components cannot be given refs.Did you mean to use React.forwardRef()?

### 解决方案:

将ref改成forwardRef

(class组件用ref, 函数组件用forwardRef)

### Label.tsx

```
1 interface IProps{
2   forwardRef:any;
3 }
4 const Label = ({forwardRef}:IProps) => {
5   return <div ref={forwardRef}>标签</div>
6 }
```
